Other details of the programme	<p>Master Program in Management of Public Health was established in 1997 in the framework of International project TEMPUS. This is up to now the only program in Lithuania, integrating public health and management fields. Two forms of the study program enable students to combine their professional careers and studies. The purpose of the program is capacity building for health system, through training specialists in public health management practice, research, and teaching. Graduates can continue studies for doctoral degree. During the program, competences are developed in the assessment of health determinants and health status of population, planning and implementing of health promotion measures, evaluation of health systems and health reforms, assessment of the activities of health services. Graduates are empowered to integrate public health and management competences in the process of leading and managing health care and related institutions, aiming at health improvement</p>

	of the population.
Access to professional career	Graduates of the program may pursue careers in different levels of health management structures (ministries, health departments of municipalities), public health centres, public health bureaus, health insurance funds, public and private health care institutions, international organizations and allied fields as professionals with management responsibility or interest.
Students' mobility	Bulgaria (Medical University-Plovdiv); Denmark (Aalborg universitet); Spain (Universitat Autònoma de Barcelona, Universidad de Zaragoza); Island (Háskólinn í Reykjavík); The Netherlands (Universiteit Maastricht, Hogeschool Utrecht); France (École des hautes études en santé publique); Finland (Itä-Suomenyliopisto, Tampereen yliopisto); Sweden (Högskolan Kristianstad, Mälardalens Högskola, Örebro universitet); Turkey (İstanbul Bilim Üniversitesi); Germany (Hochschule Fulda, Hochschule für angewandte Wissenschaften Hamburg, Technische Universität Ilmenau).
